

Burleigh County Sand Bag Disposal Plan

- 1) Residents should keep sand bags in place until waters drop below flood stage.
- 2) Once the Missouri River drops below flood stage, residents can dispose of sand bags in any of the following methods:
 - a) Resident may use the sand within their own property to raise low areas. **You should not block natural drainage ways or fill wet lands.**
 - b) As of August 3, residents may drop sand bags off at any of the area transfer stations. See attached map for location of transfer stations.
 - c) The County will provide road side sand bag removal under a contract. The removal schedule will be based on zones (See attached map for zone identification.) Each zone will be opened and active during a two week period (to be determined by the County Engineer with notification thru press releases).
 - 1) When a zone is activated the homeowners within that zone will be responsible for removing bags from around their home and placing the bags on the public roadway next to each home.
 - 2) Homeowners will place the bags between the edge of the road and not more than 4 feet into the driving lane.
 - 3) Contractor will remove bags daily during the two week activated period.
 - 4) Homeowners are encouraged to extend out the placement of their bags over the two week period to facilitate a smooth removal process.
 - 5) Homeowners will place bags to insure that traffic and emergency vehicles have access through the street at all times. **If any resident or residents block access to through traffic the County Sheriff's office will issues tickets.**
 - 6) All other material (such as plastic sheeting, hay/straw, One ton sand bags, lumber, etc.) used in the construction of the homeowners' dikes will be the responsibility of the homeowner and will not be picked up by the Contractor.
 - d) Once the zone has been deactivated, the homeowners will be responsible to bring their sandbags to the area transfer locations. **Any resident placing material within the Right of Way after your zone is deactivated will be issued a ticket from the County Sheriff's office.**
- 3) Area transfer locations will be opened until October 31.
- 4) Zones will be activated by the County Engineer as weather and river levels permit.

BURLEIGH COUNTY, NORTH DAKOTA SANDBAG ROADSIDE COLLECTION ZONES
