

This staff gauge is located on 158th St NE, approximately 1 mile north of the I-94 interchange at Menoken. The gauge location is on the east side of road on the third power pole to the south of the bridge. The reading on this gauge simply indicates a rise or fall of the creek level at that location. This is the first gauge after the confluence of the east & west branches, however there are still some fairly major tributaries yet to dump into the creek downstream from this location.

<u>DATE/TIME</u>	<u>LEVEL</u>
